NATHAN HEILAND

Software Developer · Active TS/SCI Clearance

San Antonio, TX · nathan@heiland.email · resume.heiland.tv · github.com/rinNeso

SUMMARY

Software developer with 7+ years of experience building web applications, CI/CD pipelines and simulation tools for the U.S. Air Force and private industry. Currently a team lead at Platform One, the DoD's enterprise DevSecOps platform, where I lead and mentor developers and serve as the security and compliance reviewer for AI-assisted code. Daily user of AI coding tools since 2022, now primarily Claude Code, with a strict human-in-the-loop standard for anything that ships.

TECHNICAL SKILLS

- **Languages:** JavaScript, Java, Swift, Python, Lua, Visual Basic (VBA), SQL, HTML/CSS, Bash
- **Frameworks:** Vue.js, Vuetify, VitePress, Spring, SwiftUI, Apple HealthKit
- **DevOps:** Self-hosted GitLab CI/CD, Platform One Party Bus and Big Bang, Docker, GitHub Actions, Maven, Tomcat, TestFlight
- **Systems:** Red Hat Enterprise Linux, TrueNAS SCALE, ZFS, Cloudflare Tunnel, Ubiquiti networking
- **AI tools:** Claude Code, Ask Sage, OpenAI Codex, Gemini, self-hosted LLMs (Qwen)
- **Practices:** Scrum, secure code review, technical mentorship, Neovim

EXPERIENCE

Team Lead / Software Developer — U.S. Air Force, Platform One

San Antonio, TX · Feb 2024 – Present · Staff Sergeant, Computer Systems Programmer (1D7)

- Promoted from front-end developer on a 10-person team to lead of a 4-person team, mentoring 3 junior developers.
- Co-built p1.dso.mil, Platform One's public website, from scratch in two weeks with one other developer using Vue.js and Vuetify.
- Stood up new projects on Party Bus by adapting a standard self-hosted GitLab CI/CD pipeline to each project's build, test and deployment needs.
- Review AI-generated code from teammates for security and compliance before merge, combining hand review with AI-assisted analysis.
- Helped migrate several documentation sites to VitePress.
- Work in sprints with full Scrum ceremonies: planning, daily standups, reviews and retrospectives.

Software Developer — U.S. Air Force, LeMay Center Wargaming Institute

Montgomery, AL · Mar 2020 – Feb 2024 · Computer Systems Programmer (1D7)

- Built, maintained and deployed simulation tools supporting wargames for general officers and other senior military leaders.
- Supported dozens of joint wargames with partner nations including Japan, South Korea, Germany, France, the United Kingdom, New Zealand and Australia.
- Customized units and statistics in a commercial wargame engine with Lua scripting.
- Automated bulk updates to large Excel datasets with Visual Basic, replacing manual edits.
- Trusted by the IT department to deploy and administer a wargame on a Red Hat Enterprise Linux server, outside my assigned duties.

Junior Software Developer — Primerica

Atlanta, GA · 2017 – 2018

- Upgraded a customer portal serving Primerica's ~5.5 million life insurance clients from Java 6 to Java 8.
- Resolved dependency and compatibility issues across 7 interconnected Maven projects using Spring, Tomcat, Oracle and Bouncy Castle.
- Maintained JUnit tests on a 3-developer team in a waterfall process.

PROJECTS

Homelab and Self-Hosted Infrastructure — resume.heiland.tv

- Built a TrueNAS SCALE storage and application server on a refurbished Dell Precision T7910, racked with a Ubiquiti router, switch and access point.
- Host containerized services including a Jellyfin media server and Counter-Strike 2 and Minecraft game servers.
- Expose public services on subdomains of a custom domain through Cloudflare Tunnel, with a LAN-side reverse proxy and wildcard TLS so devices at home connect directly.

AI Discord Bot — github.com/rinNeso/discord-summary

- Summarizes Discord conversations with a self-hosted LLM (Qwen 3.8 27B), keeping all data on my own hardware.
- Provides text-to-speech in voice channels so members without microphones can take part.

Disc Archiving Automation

- Built scripts with Claude Code that detect an inserted disc, copy it to the media library and eject the disc when done.

Morsel: Nutrition Tracking iOS App — github.com/rinNeso/morsel

- Built a native iPhone app in SwiftUI with Claude Code that tracks calories and weight and paces eating to encourage slower meals.
- Integrated Apple HealthKit and distributed builds through TestFlight.

SoloRef: Basketball Referee watchOS App — github.com/rinNeso/soloref

- Built an Apple Watch app in Swift with Claude Code that lets one referee run a basketball game alone: game clock, shot clock and score.
- Designed distinct haptic cues at 6 seconds left on the shot and game clocks, at shot-clock expiry and at 1:30 left, so the referee never has to look down.
- Implemented FIBA 2026 shot-clock rules and a half-court 3v3 format, kept haptics alive wrist-down with a HealthKit workout session, distributed through TestFlight, and used it to officiate a basketball game at my unit's sports day.

EDUCATION

- **Georgia Southern University** — Coursework in Computer Science, 2015–2016 and 2018–2019
- **Gwinnett Technical College** — Coursework in Computer Programming, 2016–2017
